### **Infotrieve Secures 2<sup>nd</sup> CODiE Award**

*- Mobile Library™ Voted Winner in Software and Information Industry Association's Science, Technical and Medical Information Resource Category -*

WILTON, CT – June 1, 2011 – Infotrieve, Inc. ([www.infotrieve.com](http://www.infotrieve.com)), the global leader in e-content business service solutions, today announced that its Mobile Library™ won the Best Science, Technical and Medical Information Resource in the Software and Information Industry Association's (SIIA) 2011 CODiE Awards.

Infotrieve's Mobile Library offers fully secure, cloud-based anywhere, anytime access to enterprise e-content, along with instant access to a world of knowledge on a pay-per-view basis. Leveraging Infotrieve's "borderless office" technology, users can seamlessly switch between their PC, Mac® or iPad™ without skipping a beat, as their workspace is automatically synchronized across devices.

The Mobile Library was launched in September 2010 as Infotrieve's newest addition to the Content SCM® platform, a content access and management solution with more than 300,000 users from nearly 6,500 organizations in over 80 countries. Content SCM won the 2009 CODiE award for the Best Online Science or Technology Service.

The Mobile Library was recently significantly upgraded with fully secure social media and collaboration tools. Users can now create private virtual work groups based on common interests, functional areas or project teams. Members of the groups can follow one another's progress, share and collaborate on documents and other work products, provide input and receive feedback through annotating, commenting, rating and reviewing. Abstracts, reviews, annotations and workgroup conversations are full-text searchable with relevancy ranking and hit highlighting, and are automatically organized and cross-referenced based on user-defined tags. To ensure up-to-

the-minute awareness, automatic alerts are delivered when relevant content is purchased or flagged by a work group member, and can be shared within work groups. The Mobile Library also supports other forms of discovery including personalized recommendations, custom RSS feeds, browsing and sophisticated searching.

“We are honored for the Mobile Library to be selected as a 2011 CODiE award winner,” said Ken Benvenuto, President and CEO of Infotrieve. “The Mobile Library is a revolutionary advancement in providing a unique combination of anywhere, anytime copyright compliant access to content in tandem with a fully secure social networking environment, and exemplary of Infotrieve’s commitment to developing innovative business service solutions that deliver a consistently high ROI through helping our clients work more productively.”

“For more than 25 years, the CODiE Awards have recognized the most innovative new technology products and services,” noted SIIA President Ken Wasch. “The software recognized today underwent an intensive review by industry peers, subject matter experts, analysts and journalists to make it into the winner’s circle. These products provide the business solutions that fuel our economy and solidify America’s place in the global marketplace. SIIA warmly congratulates all of the winners and nominees of the CODiE Awards.”
